

COVID-19 RESEARCH STUDY

Recruiting COVID-19-Affected (Positive, At-Risk) Pregnant Individuals

Dr. Xu Yu, Dr. Jonathan Li, Dr. Andrea Edlow
Clinical Research Coordinator: Sammy Devane
IRB Protocol #: 2020P000804

The MGH has launched a COVID-19 biorepository of various patient samples. With your help, we would like to expand this research to the pregnant population!

Who can participate?

- ALL pregnant individuals who are COVID-19-positive/at risk

How can you help?

- The goal is to collect a variety of samples from COVID-19-positive OB patients at three time points during their pregnancy/postpartum period, including at delivery.
 - Samples include blood, stool, urine, saliva, sputum, fluid, swabs of the nose, throat, vagina and/or rectum, placenta, umbilical cord blood, and/or breast milk.
 - All samples should be placed in COVID-19 study fridges in utility rooms on Blake 14, Blake 13, or Ellison 13 at the time of collection, except for **blood tubes** which should be placed into the pink study basin
 - Please page Andrea Edlow (21813) if a sample is collected postpartum

**Participating OB patients can choose to opt in or out of any and all samples*

Questions, concerns, ideas?

Please email aedlow@mgh.harvard.edu

Thank you for making this important study possible!! We could not do it without you!
